Countries with report of ZIKA virus cases

Figure 1: Countries and territories with transmission of Zika virus, 2007 – 2016

Global dengue risk

40% of the world's population is at risk
From dengue (WHO 2014)

WHO risk assessment – 12 February 2016

The risk of a global spread of Zika virus to areas where the competent vectors, the *Aedes* mosquitoes, are present is significant, given the wide geographical distribution of these mosquitoes in various regions of the world.
