Insensible Use of Antibiotics = Inappropriate Use of Antibiotics

Aim: Learn how to prevent insensible prescriptions

To reduce unnecessary ATB use

To reduce unnecessary broad-spectrum ATB used

Goal

To reduce the adverse events of ATB

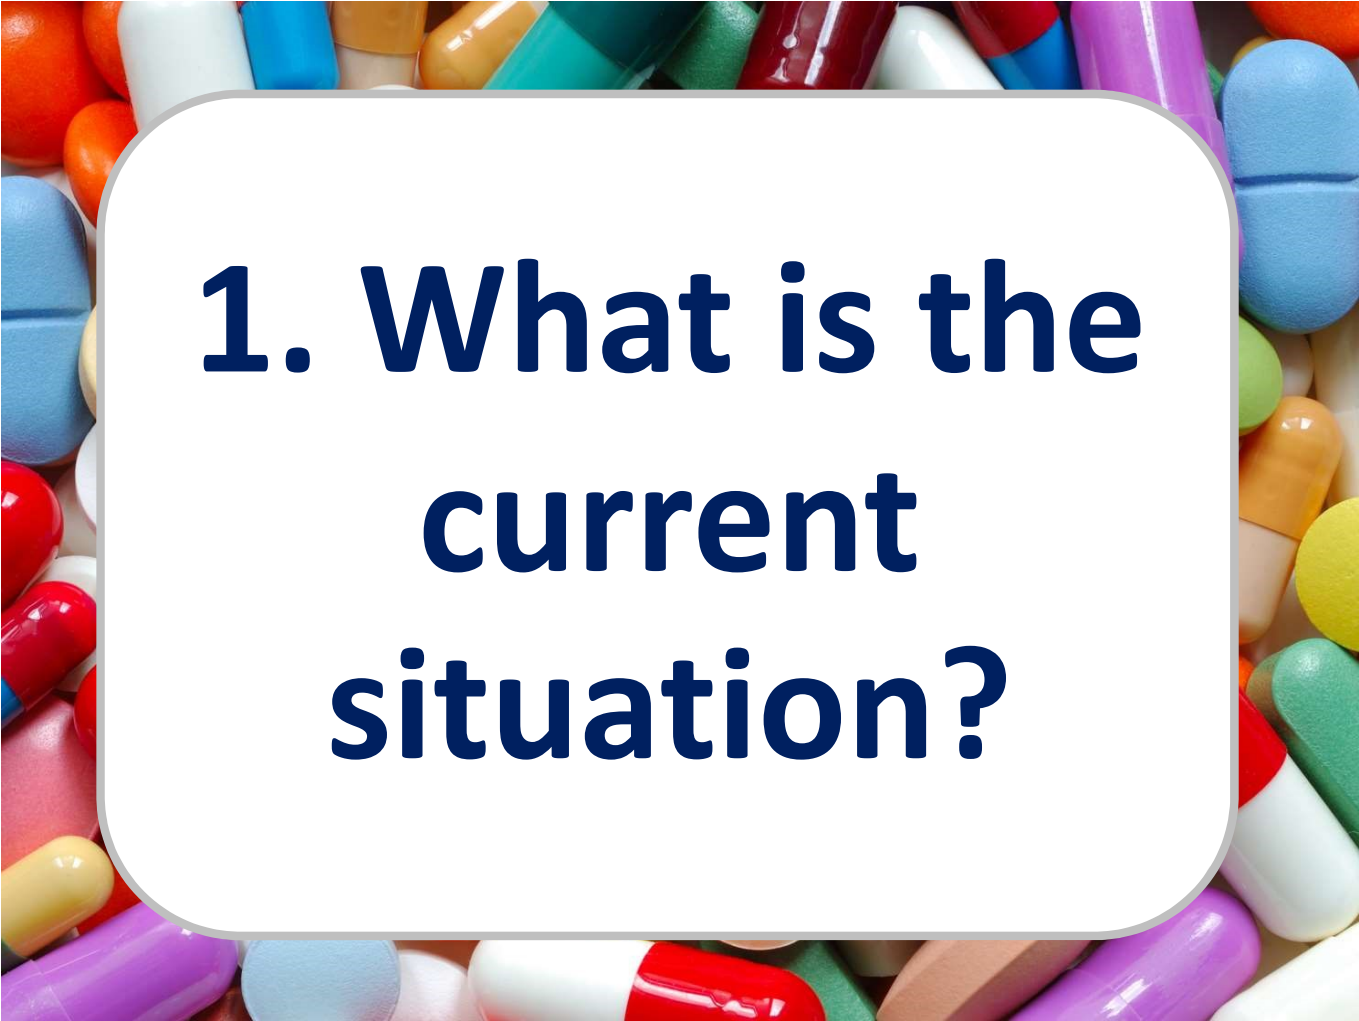

To prevent further ATB resistance

To reduce unnecessary medical cost

Let's step back to the "Four Noble Truth"

- 1. What is the current situation of insensible prescriptions**
- 2. What are the causes of the insensible prescriptions**
- 3. How to prevent the insensible prescriptions**
- 4. How to achieve the preventive measures**

**1. What is the
current
situation?**

FDA's Efforts Fail to End: Misuse of Livestock Antibiotics

WHAT GUIDANCE 213 DOES

- 1 Encourages animal drug companies to stop selling medically important antibiotics for “growth promotion” purposes, i.e. for speeding up animal growth
- 2 Encourages companies to switch to selling antibiotics for use in livestock with veterinary oversight.

WHAT GUIDANCE 213 FAILS TO DO

- 1 Fails to stop the dangerous, routine use of antibiotics by allowing use for disease prevention to continue
- 2 Fails to ensure that total antibiotic use in livestock will decrease
- 3 Fails to provide use reduction goals and a way to track progress
